

EOS DEVELOPS, PRODUCES AND SELLS TECHNICAL CONSUMABLES FOR THE WORLDWIDE'S CORRUGATED INDUSTRY AND OTHERS

4 Plants in Spain, France and China

- Around 18.000.000€ turnover without chinese factory
- Around 120 direct employees in Europe without chinese factory

Dawn or start. That's how we define our Industrial Group. Dawn is the beginning, hope and positivity; but it is also the beginning of moving towards continuous improvement with the scope of excellence as an ultimate goal.

The combination of complementary expertise in the design, production and distribution of essential supplies involved in the heart of several industrial processes.

Two production plants are located in Spain, one in France and one in China, which involve the production of mecapolyurethane plastics technology, technical textiles and special tools.

A multitude of leading applications in industries as diverse as packaging, military aircraft, transporting alumina, tire industry, mining operations etc.

The presence of commercial services of over thirty representation agencies throughout seventy countries.

The dawn of a beautiful human and industrial adventure, in permanent movement and growth. Growth through our market share with the development of innovative technical solutions, but also external growth, in acquiring new branches of activities in logical complementarities of markets.

EOS is primarily for you. Our energy, our vision, our talent and our passion is for your greatest service.

A serious professional group with a touch of humour and creativity.

EOS DEVELOPS, PRODUCES AND SELLS THROUGH:

RODICUT & RODICUT CHINA
Polyurethane for corrugated packaging and others industries
(Anvil covers, wheels, spare parts...)

BRICQ SAS & BRICQ USA
Textiles
(Corrugated belts and others)

TOOLS CORRUGATED SL
Rotary cutting dies

CORRUGATOR BELTS

www.bricq.fr

Exclusive development by RODICUT, focused on obtaining a higher productivity and rotary diecutting quality, for a longer lifetime of the polyurethane and ensuring the perfect control and dimensions of the die-cut sheet.

These free-wheeling anvil covers consist in hard inner cores, which are vulcanized with Rodicut polyurethane of the top quality and resistance to the cut. Its light weight and easyhandling allows one operator the frequent rotation in minimum time: 2 minutes.

Une exclusivité RODICUT, le Rapid Cover V7 est renforcé afin d'obtenir une productivité maximale et une parfaite qualité de découpe. Avec une durée de vie du polyuréthane allongée, le Rapid Cover V7 sécurise les tolérances dimensionnelles.

Composé de Coquilles vulcanisées en rotation libre sur le cylindre. Très léger et maniable par un seul opérateur, il permet une rotation fréquente en un minimum de temps: 2 minutes.

STANDARD ANVIL COVERS

Jig-saw-joint (knuckle) locking system for easy mounting and rotation (no bolts) in a time of 15 minutes, for frequent rotation. Flexible fibre net which avoids deformation and makes mounting easier than metal. Excellent polyurethane: longest life and highest cut resistance. Wide range of references for most of the rotary machines and unit slotter in the market. Range hardness 88 and 91 shores. Availability of DoubleWidth for the most popular references: better fitting on the anvil cylinder, less joints between pieces, less anvils to install and rotate and savings in the cost of set.

CONTREPARTIES DE DÉCOUPES STANDARD

Son attache en forme de puzzle facilite le montage et la rotation (sans vis) en un temps de 10 minutes pour permettre une rotation fréquente. Support de fibre souple qui empêche la déformation et facilite le montage par rapport aux supports métalliques. Excellente qualité de polyuréthane, une durée maximale et une forte résistance à la coupe. Disponibilités de références pour la majeure partie des machines de découpe rotatives et unités slotter. Gamme de duretés 88 et 91 SH. Disponibilité en double largeur pour les références les plus connues : meilleur ajustement sur le cylindre, moins de jonctions entre les bandes donc moins d'assemblage. Moins de pièces donc plus d'économies sur le coût d'ensemble.

WHEELS AND OTHER SPARE PART

Wide range of polyurethane wheels: no crush wheels, feed wheels (Sun, Prime, Rotofeed).

ROUES ET AUTRES PARTIES

Large gamme de roues en polyuréthane: roues basse pression no crush, galets de margueur (Sun, Prime, Rotofeed).

ROTARY CUTTING DIES AND DIEMAKING MATERIALS

Curved woods, rubbers for ejection and guiding, cutting and creasing rules, gluing pins, hammers.

FORMES DE DECOUPE ROTATIVES ET MATÉRIAUX POUR FORMES À DÉCOUPER

Coquilles, gommages d'éjection et d'entraînement, filets coupants, refouleurs, plaques de picots, perforateurs, marteaux.

This new needed belt has fibers resistant to hydrolysis. It has a new improved edge treatment (G3) with high resistance to abrasion and glue repellent properties.

It reaches the same life time of a woven belt but it gets a faster board-drying.

Ce nouveau tapis aiguilleté avec des fibres anti hydrolyse, nouveau traitement G3 anti colle et très forte résistance à l'abrasion, permet d'atteindre les durées des tapis tissés tout en séchant plus rapidement le carton.

BRICQ-POWER (With optional G2 treatment)

The belt thickness is now 9 mm, instead of 7,5mm, for higher moisture absorption.

The new fibers have a better resistance to hydrolysis.

The improved edge-treatment (G2) prevents glue from sticking on the edges and makes the belt very high temperature resistant (over 300°C).

The hot-jaw seam is now more deeply anchored into the belt structure and eliminates clip marks on the board. Belt lifetime is thus increased by about 15 % and can easily reach 80 million of linear meters.

BRICQ-POWER (Traitement G2 optionnel)

La nouvelle épaisseur de 9 mm (auparavant 7.5) améliore l'absorption d'humidité. Les nouveaux fils sont résistants à l'hydrolyse

Le traitement des lisières G2 est anti collant et résiste à plus de 300°C

La jonction « Hot jaw » intègre les agrafes complètement dans la structure du tapis et parfaitement non marquante

La durée de vie de ces nouveaux tapis est augmentée de plus de 15% et atteint facilement les 80 million de mètres linéaire.

BRICQ-SPEED

This corrugator belt has hydrolysis resistant fibers resulting in improved lifetime.

They are mix with monofilaments that increase evaporation for a faster board-drying.

It now also comes with the new G2 edge treatment.

BRICQ-SPEED

Le nouveau BRICQ-SPEED avec ces fils anti hydrolyse augmente sa durée de vie. Le mélange avec des mono filaments augmente l'évaporation pour un séchage ultra rapide du carton.

Les lisières peuvent être traitées G2.

BRICQ-TRACK

This needed bottom belt is specially designed to improve pulling and has the best tracking properties. Its high-grip coating on board side prevents any risk of slippage on «difficult» board (coated board/white board) or heavy board. It is also an option for machines with small cold plate.

BRICQ-TRACK

Tapis aiguilleté destiné à la partie traction. Son revêtement spécial face carton à la meilleure capacité de traction. Ce tapis est prévu pour la traction des papiers difficiles (couchés, blancs, pré-print) et des cartons les plus lourds. Il est aussi une alternative pour des machines avec table froide petite.

BRICQ-LAGG 55

This lagging material has excellent grip on any kind of belt with high Shore hardness for better wear resistance.

Unlike rubber, it can withstand high temperatures without melting or cracking and without leaving deposits on the rolls.

BRICQ-LAGG 55

Ce revêtement de cylindres a une excellente accroche (grip) sur tous les types de tapis. Il résiste à des températures élevées sans risque de fusion, de craquelure ni de dépôts caoutchouteux sur les rouleaux.
