

Belts

BRICQ-SPEED

The new generation of woven fabric. This innovative high technology product has a permeability 10 to 20 times higher than standard belts. This fabric offers the best combination of life and porosity. The highly resistant weaving pattern gives the belt exceptional dimensional stability and life on the machine. This fabric is particularly recommended on very high speed machines and for the most sensitive production of board.

J201

Technical Data

Polyester woven belt

- Weight: 2 750 g/m²
- Thickness: 5.50 mm
Perfect homogenous thickness
- Permeability:
7 200 m³/m²/h under 300 mm WG
Very high permeability and porosity for optimum evaporation
- Heat setting: High stability
- Guiding control at the end of the manufacturing process :
Provides optimum belt tracking on the machine

Treatment and seam

- Flocked seam :
Eliminates clip marks on the board
- Coating on board side :
Improves belt grip on board side and provides positive board grip

Options to improve belt performance

- Edge treatment:
 - Reduces edge wear in contact with hot plates
 - Prevents glue from sticking on the edges (G/G2)
